

Look back. Build forward.

Explain the ideas that brought you here. Build one small app with a feel that fits your theme.

01 CHOOSE

02 RECAP

03 BUILD

04 SHARE

ONE PROJECT. TWO CLASS DAYS.

Choose one theme. Everyone makes the same four-stop visual recap and a working HTML, CSS, and JavaScript app with a linked 3D view.

CHOOSE A THEME ONLINE

The online guide holds the full requirements.

DAY 1 / ACTION 5A

Plan. Explain. Start.

Use the whiteboard, then turn your recap into a visual guide for someone new.

00 / PRE-START

Open your CS110 GitHub project, Week 4 site, and 3D view in VS Code. Confirm you can preview, save, commit, and push.

THE FOUR-STOP NEWCOMER RECAP

01 / MINDSET

How we learn

Questions, creativity, personality, support. Show one time your approach changed.

02 / STORY TO SCREEN

How an idea becomes a UI

Audience, need, genre, and the Visual, Logical, and Data hats.

03 / TOOLS AND CODE

How the app works

HTML, CSS, JavaScript, VS Code, Git, 3D templates, and reusable code.

04 / NETWORK + PEOPLE

How it reaches others

Browser to name server to site server; GitHub and Discord help people work together.

DO THESE THREE THINGS IN ORDER

1 Sketch the route — 2 Draft the recap — 3 Start the app

5A EVIDENCE

Whiteboard photo, recap draft, first app screenshot, GitHub checkpoint, and a peer question or correction.

OPEN ACTION RECORD 5A

Finish. Test. Explain.

Make one useful interaction visible. Match the app and 3D view to your theme.

ONE INTERACTION WITH A VISIBLE RESULT

USER ACTION

A click or choice

JAVASCRIPT

The app responds

VISIBLE RESULT

The page changes

ADAPT THE 3D VIEW

Change one setting, label, or object from the Week 4 template so it belongs to your theme.

04 / FINISH

Make it work

Link the app and 3D page. Explain each part's job.

05 / TEST

Watch a newcomer

Try desktop, narrow screen, keyboard, and both links. Fix one unclear part.

06 / SHARE

Explain it on Discord

Name your theme, app, one recap analogy, and what you changed after testing. Push the revision.

5B EVIDENCE

Tested app and 3D view, whiteboard trace, peer result, revision, Discord post, and GitHub push.

OPEN ACTION RECORD 5B

Check. Save. Submit.

Keep the recap, app, 3D page, evidence, and receipt together in GitHub.

FIVE REQUIREMENTS TO CHECK

- R1** Visual four-stop recap for a newcomer
- R2** Theme, audience, whiteboard plan, first GitHub push
- R3** Working interaction and adapted 3D view
- R4** Peer test, revision, Discord explanation, second push
- R5** Tested links and selection receipt in Canvas

THE PACKAGE SHELF

A package is reusable code another developer shares. Your app can borrow one part without borrowing its whole idea. Understand the analogy; no npm commands are required this week.

READ THE NPM ANALOGY

FINAL CANVAS RETURN

Submit your tested GitHub URL, working site link, and theme selection receipt. The receipt records your choice and requirements, not completion or a grade.
